

Midterm Activity #4 – Student Payment System with Validation Counter

Objective

Create a Java program that simulates a **student payment system** using decision structures, loops, and user-defined validation.

Program Requirements

1. Create a Java program named:
StudentPaymentSystemLastName
(Example: *StudentPaymentSystemBedis*)
2. Ask the user to input:
 - Student Name
 - Student ID
 - Total Tuition Fee
3. Display the menu:

===== PAYMENT MENU =====

1. Pay Tuition
2. Check Balance
3. Apply Discount
4. Exit

Program Rules

General Rules

- Use **switch statement** to process menu options
- Use **do-while loop** to repeat the program until Exit
- Use **nested if statements** for validation
- Use a **counter variable** to track number of transactions

Payment Rules

1. Pay Tuition

- Ask for payment amount
- Validate:
 - If payment > remaining balance → display: *Invalid Payment*
 - Else → deduct from balance
- Increment transaction counter

2. Check Balance

- Display remaining balance
- Increment transaction counter

3. Apply Discount

- Ask user if they are:
 - Regular Student
 - Scholar

Conditions:

- If Scholar → 20% discount
- If Regular → no discount
- Discount applies only once

4. Exit

- Display:
 - Student Name
 - Total Transactions
 - Final Balance
- End program

◆ Additional Conditions

- Prevent negative balance
- Prevent multiple discount applications
- Show message: *No remaining balance* if fully paid

Submission Format

- Submit the Java source code file (.java)
- Filename format:

Section_LastName_FirstName_StudentPaymentSystem.java

- Include screenshots showing:
 - User input
 - Processing
 - Final output

Academic Integrity Policy

Students must write their own program.

Strictly prohibited:

- Copying code
- Sharing answers
- Downloading solutions

Identical outputs/code = score of 0
