

Midterm Activity #5: Personal Expense Tracker

Instructions

1. Create a Java program named `ExpenseTrackerLastName`.
2. Implement the following methods:
 - A **void method** that displays the program title.
 - A **non-void method** that calculates the total expenses using three values:
 - food
 - transportation
 - other expenses
 - A **non-void method** that checks if the total expense exceeds a budget and returns a message.
 - A **void method** that displays the total expense and the budget status.
3. In the main method:
 - Call all the methods you created.
 - Display the final output clearly.
4. Use appropriate method names, parameters, and return types.
5. Add at least TWO enhancement:
 - Accept user input
 - Add another expense category
 - Compute remaining budget
 - Display a personalized message

6. *Ensure your program:*

- *Compiles without errors*
- *Produces correct output*

Submission Format

- Submit the Java source code file (.java).
- The filename must follow this format: *ExpenseTrackerLastName.pdf* or *ExpenseTrackerLastName.docx*
- Include screenshots of the program output showing the following:
 - User input
 - Program processing
 - Final output/result
- The screenshot must clearly display the entire console output.

Academic Integrity Policy

- Students must write their **own program**.
- The following are **not allowed**:
 - Copying code from classmates.
 - Sharing source code.
 - Downloading solutions from the internet.
- Students with **identical programs may receive a score of 0**.
